

The mark of enduring quality

Hot Applied Thermoplastic

# Prismolux™ Moisture Proof

PRODUCT SHEET

## Wet conditions? No problem.

**Prismolux™ Moisture Proof** is a Type I hot applied thermoplastic, **specifically engineered for use on moist surfaces**. This product has been formulated with a **higher adhesive value** than standard road markings, meaning it can be applied onto damp road surfaces.

Where road marking installations often stall due to ongoing wet weather, this revolutionary road marking enables your projects to continue as planned **all year round**.

Prismolux™ Moisture Proof continues Prismo's **long history of innovation** by ensuring that **no more applications are delayed** by rainfall.

### Extend the marking season

Apply even in damp conditions for fewer delays and cancellations, preventing any last minute changes to the schedule.

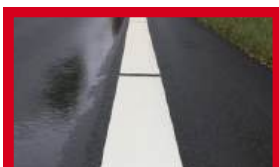

### Cost-efficient project completion

Cut down on wasted traffic management and labour costs whilst keeping your project running smoothly and efficiently.

### Long-lasting performance

Achieves high performance values for durability, retroreflectivity and skid resistance, reducing the frequency of reapplication due to wear and tear.

### Reduced carbon output

Reduce energy usage and carbon emissions from heaters, allowing for a more sustainable road marking project.

Prismolux™ Moisture Proof is **Nordic certified to BS EN 1824** by the VTI certification body.

Under these road trials, the product achieved:

- **P5.5** for **durability**
- **R3** for **retroreflectivity**
- **S4** for **skid resistance**
