Robur® Grip

PRODUCT SHEET

HIGH FRICTION COLOURED SURFACE TREATMENT

A **durable, anti-skid** MMA solution designed for high-traffic areas to enhance grip, control steering, and improve driver and pedestrian safety.

Ideal for heavily trafficked roads, junctions, crossings, bike lanes, emergency areas and more, Robur® Grip creates clear delineation, heightened vehicle control, and visually striking zones that **remain effective under pressure**.

It's fast-curing, high quality formula is available in an extensive range of **vibrant colours**, and **customisable skid resistance** to meet the specific requirements of each site.

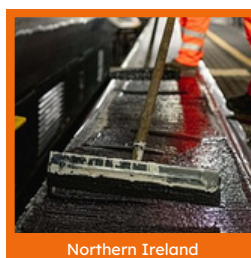

Robur® Grip
Emergency Area Surface Treatment
Transport Research Laboratory, UK

A tough, textured surface that enhances traction to protect against pedestrian slips and vehicle skidding.

Quick and versatile system

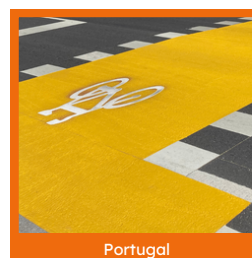

Single pass system that uses back-rolling and/or premix aggregate to achieve desired SRT.

Northern Ireland

Fast curing formula

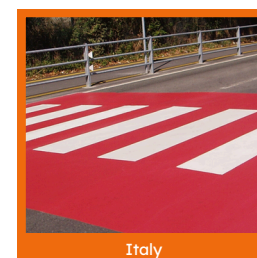

Minimises road closure and traffic disruption with typical curing times of just 15-35 minutes.

Portugal

Sustainable performance

Highly durable, solvent free MMA reduces the frequency of reapplication.

Italy

Key features

- Quick and easy to apply in a range of climates (0°C to 35°C)
- Manual application using roller or squeegee
- Suitable for application on asphalt and concrete
- Exceptional colour retention, even in high-traffic and harsh weather
- Robur® Grip White is certified for durability to BS EN 13197 and BS EN 1436 by BAST
- Can be applied with or without aggregates to achieve desired skid resistance from 45 to ≥ 80 SRT
